**Abstract-** At Present ALBOMO Editing and Designing and it all procedures are not online base. It creates lot of problem, when there are customers must face many problems. Customers can go outside and find photographer and book him. in that customer will wasting so much time. in that album cannot seeing online. and then after that we have select her album photos and go there and give him. so, customers must face many problems. When there are no online websites has face many problem. in that payment problem also. and in that albums not get warranty for any album. in that customers faces that for album designing is no good and photography also, but this is main problem. This way the customers will faces this problem normally. Now a day's customers or visitors can easily find a photographer. and customers or visitors can book photographers for wedding, birthday, pre-wedding, fashion...etc. and customers will easily give the feedback. customers and visitors are easily registration then after will be able to book order. In that customers will find different types album designing for make her album. And then after that there will be customers will show her album online also. There are mainly three user's admin, customer, photographer in this system, also another module like wedding, album designing, pre- booking order, pre-wedding etc... included in this system.

**Keywords-** Photography Editing by photographer, Online Album, Pre-Wedding Shoots, Advance Book Order, Hire Photographers.

## I. INTRODUCTION

Now a day's customers or visitors can easily find a photographer. and customers or visitors can book photographers for wedding, birthday, pre-wedding, fashion. etc. and customers will easily give the feedback. Customers and visitors are easily registration then after will be able to book order. In that customers will find different album designing for make her album. And then after that there will be customers will show her album online also. Then after using this website customers will book order online for wedding. etc. and price will be set normally comfortable as per as customer requirement. in that album design will complete then after send mgs code for album viewing online. And in this cod is applicable. And online also. In this album will give 20years warranty. in this way customers will give her feedback and contact us easily and its comfortable.

Admin:

- In that admin will add photographers and customers when its registration towards. Then after admin will give updates towards that fields and admin will be also change her password, admin will send message code for album to customers.

Photographer:

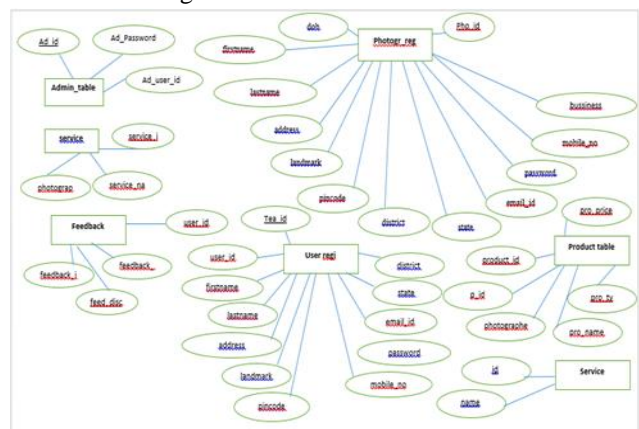

- In that photographer will first of all registration then after it also change her password then it will upload her events like wedding, pre-wedding, etc. in that in this photographer will be upload her photos. in this there will be see her album-designing.

Customers:

- In that customers will first of all registration and then login also and change password also. Then customers can search different photographer and book her order also and it can also choose different album designing for her wedding photos. Then after can see online album through message code. Then after contacting to photographer directly.

## II. LITERATURE REVIEW

The purpose of this document is to provide a detailed overview of our website ALBOMO and in that album will be seeing online also through by sending him message code in mobile. Then after book order online also and cod also available and online banking also.

### III. WRITE DOWN YOUR STUDIES AND FINDING

In brief, our project is meant to define to make online album editing and designing by photographer. In our website visitors can easily find a photographer. and customers or visitors can book photographers for purpose of occasionally function like. wedding, birthday, pre-wedding, fashion...etc. and customers will easily give the feedback. customers and visitors are easily registration then after will be able to book order. In that case customers will find different album designing for make album. And then after that there will be customers will show album online and also using this website customers will book order online for wedding and prewedding shoots.

In this website there will organize work inside the admin side and proposed system will do task:

- Insert photographer information such as name, number, address, dob, etc.
- Insert customer information such as name, address, dob, number, etc.
- In that customer see her album online also.
- In that there will be choose different album designing also and send feedback to admin also and contact also.
- In this there will be change can password also.

And that main thing is customers will can find different photographer also and book.

### IV. CONCLUSION

The ALBOMO is developed using ASP.NET & SQL Server fully meets the objectives of the system for which it has been developed. Through this system we can conclude that the system can hire by photographer. After completing ALBOMO website we can see the actual system and our system comfort to see her online album and seeing, book different photographer which has high rates.

### ACKNOWLEDGMENT

We express our sincere thanks to Prof. Ajaykumar T Shah of Computer Engineering department, ALPHA COLLEGE OF ENGINEERING AND TECHNOLOGY for his

support and guidance for doing the project and care taken by him in helping us to complete the project work successfully. This is to place on record our appreciation and deep gratitude to the persons without whose support this project would never been seen the light of the day. We express my sincere thanks to Prof. Ajaykumar T Shah Head of the Department, in Computer Engineering, ACET for extending his help.

We have immense pleasure in expressing thanks and deep sense of gratitude to All Faculties of Computer Engineering, ACET for their valuable suggestion and guidance throughout this project.

Finally, at the outset we would like to thank all those who have directly or indirectly helped us to accomplish our project successfully.

project and care taken by them in helping us to complete the project work successfully.

This is to place on record our appreciation and deep gratitude to the persons without whose support this project would never been seen the light of the day.

We express our sincere thanks to faculties, Head of the Department, at Computer Engineering, ACET for extending their help.

Finally, at the outset we would like to thank all those who have directly or indirectly helped us to accomplish our project successfully.
