Abstract- Rural industries play a significant role in employment generation, yet they face challenges related to employee welfare, health, and safety. This study analyzes the welfare measures, health facilities, and safety practices in rural industries. The research evaluates employee satisfaction, awareness of personal protective equipment, and effectiveness of health facilities. The findings indicate a need for improved safety training, better welfare facilities, and enhanced awareness programs to ensure employee well-being.

Keywords: Employee Welfare, Health, Safety Measures, Rural Industries, PPE

I. INTRODUCTION

Employee welfare includes various facilities and services provided to employees to improve their living and working conditions. In rural industries, employees are often exposed to occupational hazards due to environmental and infrastructural limitations. Ensuring proper health and safety measures helps in reducing accidents and improving productivity.

II. NEED FOR THE STUDY

Rural industries are more vulnerable to labor-related issues. Understanding employee satisfaction with welfare facilities and identifying health and safety concerns is essential for minimizing workplace risks.

III. OBJECTIVES OF THE STUDY

1. To study welfare facilities provided to employees.
2. To analyze health and safety measures.
3. To assess employee awareness of PPE usage.

IV. SCOPE OF THE STUDY

The study provides insights to management for improving welfare, health, and safety measures in rural industries.

V. LIMITATIONS

Time constraints and limited employee participation affected data collection.

VI. RESEARCH METHODOLOGY

The study uses a descriptive research design. Data were collected using questionnaires from 100 employees.

VII. FINDINGS

Most employees are aware of safety policies, but some lack formal safety training.

VIII. SUGGESTIONS

Regular safety training programs and improved welfare facilities are recommended.

IX. CONCLUSION

Employee welfare and safety are essential for organizational success. Improved working conditions lead to higher productivity and employee satisfaction.

X. DATA ANALYSIS AND INTERPRETATION

Table 1: Gender-wise Classification of Respondents

S. No	Gender	No. of Respondents	Percentage
1	Male	94	94%
2	Female	6	6%

Interpretation: The above table shows that 94% of the respondents are male and 6% are female, indicating male dominance in rural industrial employment.

Table 2: Safety Training Provided by the Organization

S. No	Safety Training	No.of Respondents	Percentage
1	Yes	63	63%
2	No	37	37%

Interpretation: It is observed that 63% of respondents have received safety training, while 37% have not received any formal safety training, highlighting the need for improved programs.
